

WHY SHOULD YOU READ THIS HUMBLE 'DINI AVAZ'?

Are you not curious about your own Religion ?

Do you sometimes feel, within you, an urge, a carving, to know about the Religion in which you are born ?

Do you dismiss such feeling, thinking it to be a fad ? Or would you like to know about Zarathushtra and his Great Religion but do not know where to look for it ?

In either case, this humble "Dini Avaz" is the answer.

No! You cannot dismiss Religion as a fad. That would be highly unscientific! You could have done it in the last quarter of the 19th century, but in this 8th decade of 20th century, you simply cannot!

You may ask, why not? Does not modern science dismiss Religion? Has it not exploded all the old myths and relics of Religion? Has it not succeeded in understanding all nature and thereby pushing Religion in the realm of mere past history and geography?

If you think that way, I am afraid, you are wrong.

Looked from the angle of the science of this century, this thinking is quite old, orthodox and antiquated.

The god of science has been defied and humbled a thousand times by the God of Religion!

The god of science has failed in understanding even a speck of dust, journey to the planets notwithstanding!

WAVE-PARTICLE OF MATTER?

Take for instance an ATOM. 19th

Century science thought it was an indivisible particle and all matter was composed of 92 such different types of indivisibles. That explained away everything about matter.

But in the last (Christmas) week of that century, one simple scientist, Max Planck theorised a QUANTUM, an almost imaginary particle of ENERGY. By the third decade of the 20th century, this small energy bullet exploded and brought to the ground the whole edifice of science of matter!

No! Atom was not indivisible. It was a storehouse of very small "elementary particles" like electron, proton, neutron and host of others. And an element of mysticism was introduced in Physics when it was found that each of these elementary particles was a particle and a wave at the same time!!

This wave-particle mysticism led Physics to another baffling truth that YOU DISTURB NATURE BY YOUR VERY ACT OF OBSERVATION AND THEREFORE CANNOT KNOW ABOUT IT BY THIS METHOD OF SCIENCE.

To see an elementary particle, you have to throw light on it. But light is composed of bullets of energy and elementary particles are not so heavy. The light bullet therefore disturbs the particle. It is, therefore, impossible to know what that particle was doing in the dark or whether it was at all there before you fired your light energy-bullets! (See Dini Avaz Vo. 1-2 page 19, if you want to know about Heisenberg, the great German Physicist, who formulated this "Principle of Uncertainty.")

All matter—the whole universe (including your physical body) is made up of such elementary particles

THE MYSTICAL MOLECULE OF LIFE

What is your physical body? What is life? All living bodies are made of millions of cells. Each cell is made up of several kinds of molecules; each molecule is made up of atoms, and each atom, of the mysterious elementary particles!

But certain molecules in the cell having submicroscopic size, called DNA molecules, store within themselves the whole genetic code i.e. key to all physical and mental qualities and characteristics of the whole living animal

How can certain molecular forms and formations contain the whole code of life, is a mystery, which is not being solved in spite of tremendous efforts and exertions.

SCIENCE OF ESP

If sciences of matter and life are knocking the doors of mysticism and

mystic truths taught by Religion, the science of ESP — Extra Sensory Perception — has almost entered in. **Psychic energy and its channels are found in humans**, but, in a way that defies orthodox science. Certain events indicate the existence of a **psychic body in man**.

The teaching of Religion that **man has within him centres and channels of divine or spiritual energy ('Chakra's or Chakhra's)** is indicated in scientific conditions.

An electric aura around every living being is photographed.

Psychotronic generators, which draw out psychic energy from humans and get charged, are being worked upon in laboratories.

There is a swing of science towards the great Teachings of all Religions.

The idea that you cannot sustain Religion in this age of science is obsolete and exploded.

We give such scientific data, materials and evidence in this humble two monthly 'Dini Avaz'.

RELIGION IS LIFE ITSELF

The inner craving, you find sometimes stirring in you, to know about your Religion is not just a passing thought. It is the vibrating of some spiritual energy within you, trying to awaken you. It is the Prophet Zarathushtra's Divine Energy deep within, that is trying to break your shell of ignorance and show you the Light of God.

THIS HUMBLE DINI AVAZ HELPS YOU TO KNOW.

Zarathushtrian Religion is not just an essay written in its Holy Scriptures. It is not even a way of life. It is, for you Parsis, **LIFE ITSELE**. **Din** or **Daena** is the word for **Religion**. It is also the word for **Ahura's Storehouse of Divine Light**; it is also the word for **Lord Zarathushtra's Power Station with which you are connected on the day of your Navjot**; it is also the word for a mechanism in you called the **Religious Conscience**. It is also a word for **Kushti**, you keep tied on your body. It is also the word for a **Powerful Energy Centre** situated in your spiritual body near physical heart. That centre receives and stores **Ahura Mazda's and Zarathushtra's Light** emanating from **Their Own 'Daena'** and also from your own **Inner Self**.

DAENA IS LIFE ITSELF!

Whatever you think, speak and do is an act of Religion. In doing it, you

have either followed the teaching of your Prophet or have defied it. In doing the former, you go nearer to Him; the latter, away from Him. In either case, it is connected with Religion.

Sudreh Kushti, Manthra prayers, Fire temples are spiritual disciplines and institutions of our Religion. Each has a vast Spiritual Science behind it.

We set out here in this humble Dini Avaz the Truths from the Mystic Science of Zoroastrianism.

How to KNOW your Religion?

How to PRACTICE your Religion?

Answers are and will be in this journal.

Our aim, is no profit, but just a craving that **may the Light of Zarathushtra simmering in you come out in your physical mind and prompt you in everything you think, speak and do in this short life on the mother earth.**
